TITAN

TITAN

Comparison: SAP PM

TITAN vs SAP PM

	TITAN	SAP PM
Purpose What was it designed for	Enterprise Asset Management	Plant Maintenance
Implementaiton Time and costs	Simple and easy (within 4 -6 months)	Around 12 months or more
Configurations Time and costs	Quick, simple and easy	Extensive trainings and resources required
Customizations Time and costs	Localy developed system, easy to customize. Standard customizations requires around 1 month	Customization is very time consuming and is expensive
Integrations Time and costs	Quickly integratable to any system using available API's	SAP expert technical resources required to integrate, time consuming and expensive
Scalibility	As customization is easy, it can be scaled to evolve according to industry business process	Scalable, but expensive to scale according to the needs
Inventory	Provides a standard inventory system that is integrated with TITAN, Also, it can integrate to any organization inventory system through APIs	SAP material management module required, additional cost and time
Google calendar integration	Integrate schedules to Google Calender, so users can get notifications on their mobile phones from Google Calender app	No standard integration for external calender available
Work order printing	Available	Available
Asset register	Available	Available

TITAN vs SAP PM

	TITAN	SAP PM
Detailed sub-items tree	Available	Not available
Preventive maintenance - calender based	Available	Available
Preventive maintenance - condition based	Available	Available
Inspections	Available	Available
Workshop production	Available	Not available
Reports	Standard reports available, less cost and time in adding more reports	Standard reports available, additional reports requires more cost and time
Dashboards	Easy personlized dashboards available for each user, additional dashoards require less cost and time	Requires separate module for complex dashboards. more cost and time, SAP technical resource required for simple dashboards implementation
License cost	Cheaper	Expensive
License type	1 time for all users	Per user recurring module
Maintenance operating procedures	Detailed maintenance procedures options along with sub item details	Task list available but not connected to sub items of equipment
Root Cause Analysis (RCA)	Basic functionality available can generate data for RCA	Needs customization
Component level tracking	Can track any item with unique number option	Needs customization

TITAN vs SAP PM

	TITAN	SAP PM
Automatic inspection and meter entries from plant machineries	Available	Need special modules (Additional costs)
Trainings	Very few trainings required for new resources, ideally 1 week required	Extensive trainings required for new resources
User interface	Simple and neat, designed on latest technologies.	Too old and complex user interface
Recurring costs	Only maintenance/ support cost, not per user license renewal. Comparatively cheap in maintenance cost	Yes
